

Anil Kumar Konathala

Visakhapatnam, Andhra Pradesh • +91 9581071463 • konathalaanilkumar143@gmail.com •
linkedin.com/in/anilkumarkonathala • https://github.com/anilkumar5590/

Developed technical skills in collaborative software development environment, excelling in problem-solving and project execution. Demonstrated ability to adapt and learn new technologies efficiently. Looking to transition into new field, leveraging transferable skills in coding and teamwork.

EDUCATION

Bachelor of technology(B.Tech) in Computer Science & Engineering

Vignan's Institute of Information Technology • GPA: 8.9

Duvvada • 07/2022 - 04/2025

Diploma in Computer Engineering

Andhra Polytechnic College • GPA: 90.09%

Kakinada • 06/2019 - 06/2022

WORK EXPERIENCE

Asoft Global Solutions

Visakhapatnam • 11/2025 - Present

Software Engineer • Full-time

- Performed **end-to-end back-office testing** for the *JN Live Personal Application*, ensuring system reliability and data accuracy across workflows.
- Designed and developed a **Rule Engine Desktop Application using Electron.js** for the *BCBSM project*, enabling dynamic data validation and processing.
- Implemented multiple **data validation rules**, including *Not Null, Unique Check, Min/Max Length, No Special Characters, Repeated Letters, Valid Format, Future Date Validation, Month Variation, Max Age Check, Null Exception, and Composite Unique Rules*.
- Built and managed **PostgreSQL database structures**, including *auditlog, errorlog, ruleresult, rulerepository, and month_variation*, to support rule execution and logging.
- Created a **rule mapping system in MySQL** to dynamically assign validation rules to specific fields (e.g., First Name → Not Null + Valid Format), enabling frontend-driven rule enforcement.
- Developed and maintained **technical documentation** for *QueueXzen (NHF & UK)* and *BCBSM projects*, improving clarity for developers and stakeholders.
- Generated **API request & response documentation** for *JN Live Personal Application* using Swagger, ensuring clear communication of backend services.
- Contributed to the **ATM Insights project**, focusing on rule-based data validation and system design.
- Provided **technical training and mentorship to interns**, covering fundamentals of *HTML5, CSS3, JavaScript, React, Node.js, MySQL, PostgreSQL*, and deployment practices.

K Quantics Info Systems

Visakhapatnam • 02/2025 - 10/2025

Trainee Engineer

- Reformed and optimized Sunmi and Bluetooth thermal printer integration for reliable token printing.
- Built and rebuilt APKs for the QueueXzen app tailored to deployment requirements of NHF and JN UK Bank.
- Developed a web-based token generation system using React.js, improving accessibility and user experience..
- Performed end-to-end testing on printer-related test cases using the QueueXzen APK for the NHF client, ensuring reliable performance and functionality.
- Authored **User Manuals for QueueXzen Mobile Applications** (NHF & UK), enhancing usability and onboarding experience.

- Conducted **end-to-end testing and validation** for *JN Canada QueueXzen Mobile Application*, identifying and resolving functional issues.

SKILLS

Programming Languages: C, C#, C++, Java, JavaScript, Python

Web Technologies: Bootstrap, CSS3, HTML5, JQuery, ReactJS, Typescript

Libraries/Frameworks: Flask, Keras, Matplotlib, NumPy, Pandas, Scikit-learn, Streamlit, TensorFlow

Machine Learning & Deep Learning: CNNs, Data Preprocessing, EfficientNetB7 (transfer learning for image classification), Hyperparameter Tuning, Model Evaluation (Accuracy;Precision;Recall;F1-Score;Confusion Matrix), Supervised Learning (Regression;Classification;Decision Tree;Random Forest)

Databases: Firebase, MongoDB, PostgreSQL, SQL

Tools / Platforms: Android Studio, Docker, Git/GitHub, MySQL Workbench, Postman, VS Code

Additional Knowledge: Cloud Computing, Data Structures & Algorithms, Networking

Soft Skills: Analytical Skills, Communication Skills, Problem-Solving & Critical Thinking, Teamwork & Collaboration, Time Management

CERTIFICATIONS

NoSQL Databases Basics

EDX

HTML5 -The Language

Infosys Spring Board

Programming Essentials in Python

Cisco Networking Academy

Data Labeling Job Simulation

Forage

Git Command Line For Beginners

Udemy

AWS Cloud Technology and Services Concepts

DataCamp

Foundational C# with Microsoft

Freecodecamp

Introduction To Docker

DataCamp

PROJECTS

Downy & Anthracnose

Link - <https://github.com/anilkumar5590/downy-and-anthrachnose>

Developed a plant disease identification system using a fusion of MobileNet and ResNet architectures. The model accurately detects Downy mildew and Anthracnose diseases in plants with 99% accuracy. It processes images to classify and differentiate between the two diseases effectively. Applied transfer learning and data augmentation to enhance model performance. This solution aids farmers in early disease detection, improving crop health management.

WildLife Image Classification

Link - <https://github.com/anilkumar5590/wildlife-image-classification>

Built a wildlife image classifier using the EfficientNetB7 model to identify 210 animal species with 63% accuracy. The model was trained and evaluated using TensorFlow, with extensive image preprocessing applied to improve performance.

Implemented techniques like resizing, normalization, and data augmentation. Deployed the trained model through a backend API for real-time predictions. This project supports wildlife conservation by enabling automated species identification from images.

Sticky Notes

Link - <https://github.com/anilkumar5590/Sticky-Notes>

Sticky Notes web application enables users to easily create, save, and delete notes. Notes are dynamically added and styled, with changes automatically saved to the browsers local storage for persistence across page refreshes or browser restarts.

Diabetes Prediction

Link - <https://github.com/anilkumar5590/diabetes-prediction/>

The RandomForestClassifier predicts whether an individual has diabetes based on features like pregnancies, glucose levels, blood pressure, skin thickness, insulin levels, BMI, diabetes pedigree function, and age. It uses multiple decision trees to improve accuracy and reduce overfitting. The model was trained on medical data to classify patients as diabetic or non-diabetic.

Authentication

Link - <https://github.com/anilkumar5590/Authentication>

Developed a secure authentication system using React and Firebase, featuring user registration, login, password reset, Google Sign-In, and multi-factor authentication for enhanced security. Implemented email verification to restrict access until users confirm their email addresses. The system ensures a smooth and secure user experience with proper session handling and real-time Firebase authentication integration. This project demonstrates strong security measures combined with user-friendly authentication workflows.

QR Code & Barcode Generator

Link-<https://github.com/anilkumar5590/qr-code-and-bar-code-generator>

Developed a QR Code and Barcode Generator application using Python and Streamlit, enabling users to generate and download codes dynamically. The system supports multiple formats, allowing seamless conversion of user input data into scannable QR codes and barcodes. Implemented a user-friendly interface for real-time generation and preview of codes. Integrated efficient encoding libraries to ensure accuracy and fast processing. This application is useful for businesses and individuals for tasks such as product labeling, inventory management, and information sharing.

File to Audio Converter

Link – <https://github.com/anilkumar5590/file-to-audio-converter>

Developed a Streamlit-based application to convert PDF and DOCX files into MP3 audio using text extraction and speech synthesis. Enabled hands-free content consumption, improving accessibility and usability for educational and on-the-go scenarios.
